

### Payment Policy

Our office is committed to helping you make the best use of your insurance benefits. Because insurance policies vary, we can only estimate your coverage in good faith, but cannot guarantee coverage due to the complexities and constantly changing nature of insurance contracts. You are ultimately responsible for knowing the specifics of what your policy covers and for notifying us when your insurance changes.

While we do verify benefits on your behalf, we **HIGHLY** encourage that you do the same. There are a multitude of insurance plans and levels of coverage that we see. We are not able to keep track of which services are covered by each plan for each person. Insurance is a contract between you and your plan. You are responsible for knowing which services are covered under your plan. Specialized Physical Therapy will not be liable for any benefits or visits not covered by your plan.

#### Basic Insurance Benefit Information:

- Deductible amount and does it apply to physical therapy?
- Out of pocket and does it apply to physical therapy?
- How many physical therapy visits are allowed per year (are there combined therapies)?
- Is there a copay?
- What is your coinsurance?
- Is authorization or a referral required for physical therapy?

Dry Needling Consent Form

Dry needling involves placing a small needle into the muscle at a trigger point to cause the muscle to contract and then release, improving the flexibility of the muscle and therefore decreasing the symptoms.

Dry needling is a valuable treatment for musculoskeletal pain. Like any treatment there are possible complications. While these complications are rare in occurrence, they are real and must be considered prior to giving consent to treatment.

Risks of Procedure:

The most serious risk is accidental puncture of a lung (pneumothorax). If this were to occur, it may likely only require a chest x-ray and no further treatment. The symptoms of shortness of breath may last for several days to weeks. A more severe lung puncture can require hospitalization and re-inflation of the lung. This is a rare complication and in skilled hands should not be a concern.

Other risks may include excessive bleeding (causing a bruise), infection and nerve injury. Bruising is a common occurrence and should not be a concern unless you are taking a blood thinner. As the needles are very small and do not have a cutting edge, the likelihood of any significant tissue trauma from dry needling is unlikely.

Please consult with your practitioner if you have any questions regarding this information.

By signing below, you are providing informed consent to receive dry needling treatment.
